Summary

Computer Science Engineering student with hands-on experience in web development, Python, JavaScript, REST APIs, databases, and Git/GitHub. Strong foundation in HTML, CSS, responsive web design, React.js, backend development, and problem-solving, with experience building practical software and AI-powered projects. Familiar with developing user-friendly web applications, integrating frontend and backend components, working with databases, debugging applications, and following software development best practices. Eager to contribute to real-world web development projects and grow through hands-on industry experience.

Education

Sri Shakthi Institute of Engineering and Technology 2024 – 2028
Bachelor of Engineering in Computer Science and Engineering | CGPA: 7.72

K V Matric Higher Secondary School *2023 – 2024*
Higher Education-CBSE | Percentage: 79.5%

2021 – 2022
Primary Education-CBSE | Percentage: 81.6%

Technical Skills

- Frontend Development: HTML5, CSS3, JavaScript, React.js, Responsive Web Design, DOM, UI/UX Implementation
- Backend Development: Python, FastAPI, Node.js, Express.js, REST APIs, API Integration, CRUD Operations
- Web Development: API Integration, AI API Integration, Web Applications, Frontend-Backend Integration, HTTP/REST, JSON, Form Handling, Authentication(Supabase), Testing & Optimization
- **Programming:** Python, OOP, Data Structures & Algorithms, Problem Solving, Debugging
- Databases: SQL, MySQL, MongoDB, Firebase, Supabase, Database Design
- **Developer Tools:** Git, GitHub, VS Code, Antigravity

Freelance Projects:

1. **Saranya Dental Clinic Web Platform:** Website

- **Engineered & Deployed a full-stack appointment booking platform using JavaScript, Node.js, and Firebase Firestore to process real-time patient requests.**
- **Integrated Push Notifications via Firebase Cloud Messaging (FCM) to automate instant booking alerts directly to clinic administration.**
- **Designed a Responsive UI with custom CSS animations, optimizing serverless cloud architecture on Netlify to support concurrent user traffic.**
-

Projects

1.) **Mock AI – AI-Powered Mock Testing & Student Assessment Platform:** GitHub

- *Tech Stack: JavaScript, Node.js, Express.js, MongoDB, Python (Flask), Hugging Face LLM API, Chart.js, Tailwind CSS*
- Architected and developed a full-stack automated examination and assessment platform supporting role-based access control (RBAC) for **Students** and **Administrators**.
- Integrated an **AI-powered MCQ Generator** and **Interactive Study Assistant** leveraging Hugging Face LLM APIs and Python (Flask) microservices for automated test creation and real-time student doubt-solving.
- Implemented secure authentication with **JWT** and **bcrypt** password hashing, along with RESTful APIs in **Express.js** and **Mongoose** for managing exams, attempts, and student directories.
- Built an interactive analytics dashboard utilizing **Chart.js** to visualize department-wise, year-wise, and individual student performance metrics.

Achievements

- **LeetCode 50-Day Badge: Successfully completed the 50-Day LeetCode coding challenge, demonstrating consistency in problem-solving and programming practice.**
- **EASA College Hackathon: Participated in the EASA College Hackathon and developed an AI-powered project, applying problem-solving, software development, and to build a practical solution.**
